

## Special flat cables

### Design

flat cable  $16 \times 0,75 + 4 \times 1 + (2 \times 0,25) C + 4 \times 2 \times 0,25 \text{ mm}^2$

Special solutions according to customers specification

### Application

The special flat cables can be used as energy and control cables, in particular for hoisting gears, transportation systems, machine tools for medium mechanical stresses and operationally strong bends in a single plane. A special design can be provided in accordance with your request, e.g. with a bus cable.

A consulting service can be offered through our Research & Development.

In personal discussions we can focus the status of the technical situation. We will analyse the problem our customer may have, we will design a customer required solution and we will be the partner for the new design until the cable is delivered to our customer.

Advantages:

- Cost saving solutions
- Short installation times
- Protection against environmental influences
- Delivery of components and harness

*The corresponding flat cable screws can also be delivered.  
Please see column 9 - accessories.*
